

SUMMARY

Results-driven Business Analyst with 4+ years of experience in financial services and healthcare, specializing in requirements elicitation, business process analysis, workflow documentation, and solution design. Proven ability to translate business needs into functional specifications within Agile and Waterfall environments.

Skilled in stakeholder management, BRD/FRD documentation, gap analysis, UAT coordination, and data-driven decision-making using SQL, Python, Power BI, and Tableau. Strong domain expertise in regulatory compliance (HIPAA, SOX, Basel III), claims processing, risk analysis, and healthcare data integration.

TECHNICAL SKILLS

Languages:	SQL, Python, R
Methodology:	SDLC, Agile, Scrum, Waterfall
Documentations:	BRD, FRD, SRS, User Stories, Use Cases, Test Plans, Process Flow Diagrams
Visualization Tools:	Tableau, Power BI, QuickSight, Looker
Project Management Tools:	Jira, Confluence, MS Project, Trello, SharePoint
Business Analysis:	Requirements Gathering, GAP Analysis, SWOT Analysis, Risk Analysis, Cost-Benefit Analysis, Process Modeling
Technologies and Tools:	AWS (S3), SAP, ServiceNow, Excel, Visio, Alteryx, Google Analytics
Core Competencies:	Data Analysis, UAT, KPI Reporting, Data Modeling, BI Tools, Process Mapping

PROFESSIONAL EXPERIENCE

Business Analyst | Morgan Stanley, USA

May 2025 – Current

- Gathered and documented business requirements (BRD, FRD, user stories) by collaborating with traders, risk managers, and compliance teams, ensuring alignment with regulatory standards (SEC, FINRA).
- Analyzed large financial datasets (trade transactions, market data, client portfolios) using SQL and Excel, identifying patterns and risk indicators to support decision-making.
- Defined KPIs and risk metrics (VaR, PnL, trade anomalies) to monitor trading behavior and improve risk visibility.
- Facilitated Agile ceremonies (sprint planning, backlog grooming, daily stand-ups) and worked closely with cross-functional teams to ensure timely delivery.
- Created data mapping documents and process flow diagrams (UML, BPMN) to translate business requirements into technical specifications.
- Collaborated with data engineering teams to validate ETL pipelines and ensure accurate data transformation and integration.
- Developed interactive dashboards using Power BI to visualize trade activity, risk exposure, and compliance metrics, improving reporting efficiency by 30%.
- Performed UAT (User Acceptance Testing), created test cases, and ensured delivered solutions met business requirements with 95% defect resolution rate.
- Identified process improvement opportunities, reducing manual reporting efforts by 25% and improving operational efficiency.

Business Analyst | HCL Tech, India

Feb 2021 - Aug 2024

- Defined and implemented product analytics strategy by identifying and tracking key user engagement metrics such as DAU, MAU, retention rate, session duration, and feature adoption, enabling data-driven product decisions.
- Collaborated with data science teams to define ML-driven personalization use cases, including targeted patient reminders and recommendation systems to enhance user experience.
- Developed KPI frameworks and success metrics, aligning business objectives with measurable indicators such as patient retention, conversion rate, and digital adoption.
- Conducted detailed AS-IS vs TO-BE gap analysis of patient engagement workflows, identifying inefficiencies in appointment booking, onboarding, and follow-up processes.
- Implemented event tracking and user behavior analytics using tools like Google Analytics and Mixpanel, capturing clickstream data for deeper behavioral insights.
- Conducted root cause analysis (RCA) on user churn and low engagement areas, driving product enhancements that improved conversion rates by 25%.
- Translated complex data insights into actionable business recommendations, influencing product roadmap, feature prioritization, and stakeholder decision-making.
- Utilized advanced Excel functions (VLOOKUP, INDEX-MATCH, XLOOKUP) to merge and analyze patient engagement data from multiple sources, ensuring data consistency and accuracy.
- Presented data-driven insights to stakeholders using storytelling techniques, enabling better alignment between business, product, and technical teams.
- Monitored post-deployment performance metrics, ensuring continuous improvement through iterative analysis, feedback loops, and optimization strategies.
