Suhaniben Krupal Chaudhari

SUPPLY CHAIN ANALYST

Chicago, IL | +1 (872) 381-9276 | suhanibenkrupal@myjobstech.com | LinkedIn

SUMMARY:

Supply Chain Analyst with 4+ years of experience in transportation, logistics, warehouse operations, and supply chain analytics. Skilled in SQL, Python, Excel, Power BI, TMS, and WMS for transportation optimization, demand forecasting, inventory planning, KPI reporting, and root-cause analysis. Delivered measurable improvements in transportation cost, warehouse cycle time, capacity utilization, and delivery performance through data-driven supply chain optimization.

SKILLS:

Supply Chain Planning: Demand Planning, Demand Forecasting, Supply Planning, Replenishment Planning, MRP, S&OP, Capacity Planning, Safety Stock, Reorder Point, Materials Management, Supplier Risk Management
Inventory Management: Inventory Optimization, Inventory Accuracy, Inventory Reconciliation, Inventory Aging, Excess & Slow-Moving Inventory, Backorder Management, ABC Analysis, Cycle Counting, Inventory Turnover
Logistics & Transportation: Transportation Planning, Shipment Tracking, Route Optimization, Freight Management, Carrier Management, Load Planning, On-Time Delivery (OTD), OTIF, Transportation Cost Analysis, TMS, Order Management
Warehouse Management: WMS, Inbound & Outbound Operations, Receiving, Putaway, Picking, Packing, Shipping, Warehouse Capacity Planning, Storage Utilization, Order Fulfillment
Procurement & Supplier Management: Procurement, Purchase Orders, Supplier Management, Vendor Performance, Supplier Lead-Time Analysis, Supplier Scorecards, SLA Management, Strategic Sourcing, SAP Ariba, Supplier Risk Management
ERP & Supply Chain Systems: SAP S/4HANA, SAP MM, SAP IBP, SAP EWM, Oracle SCM, Oracle EBS, Oracle TMS
Supply Chain Analytics: SQL, Advanced Excel, Power BI, Tableau, Power Query, DAX, KPI Dashboards, Data Visualization, Variance Analysis, Root Cause Analysis
Process Improvement: Lean Six Sigma, DMAIC, Kaizen, Continuous Improvement, Process Optimization, Bottleneck Analysis, Cost Reduction, Operational Efficiency
Reporting & Collaboration: Data Validation, Data Reconciliation, Reporting Automation, Performance Reporting, Cross-Functional Collaboration, Stakeholder Management, Inventory Audits

EXPERIENCE:

C.H. Robinson | Supply Chain Analyst, USA **June 2025 – June 2026**

- Analyzed shipment, lane, carrier, route, and freight-spend data from Navisphere TMS using SQL and Python, uncovering cost and capacity drivers across 40 high-volume lanes and prioritizing network optimization opportunities.
- Developed Power BI dashboards using TMS and shipment data to monitor On-Time Delivery, tender acceptance, carrier performance, and transit variance, cutting weekly transportation reporting from ~10 hours to ~7 hours for operations teams.
- Evaluated lane density, carrier rates, distance, capacity, and historical volumes using SQL, Python, and Excel, supporting routing and carrier-allocation decisions that reduced avoidable transportation spend by ~10% across high-volume lanes.
- Built Python-based weekly lane-level shipment forecasts using historical TMS volumes and seasonal patterns, achieving ~10% MAPE to support carrier capacity, trailer requirements, and peak-season transportation planning.
- Investigated late pickups, missed deliveries, tender rejections, dwell, and capacity exceptions through SQL/Python root-cause analysis, helping transportation teams reduce recurring service exceptions by ~15%.
- Used Navisphere, API/EDI shipment feeds, Microsoft Azure, SQL, Python, and Power BI to support shipment analytics and carrier-performance workflows, incorporating FMCSA authority, insurance, safety, and carrier-compliance checks into transportation execution.

Delhivery | Supply Chain Analyst, India **Feb 2021 – Aug 2024**

- Reduced warehouse order-cycle time by ~10% across 5 fulfillment centers by optimizing inbound receiving, put-away, picking, packing and dispatch using SQL, WMS data and Advanced Excel, applying Lean Six Sigma and RCA to resolve recurring bottlenecks.
- Improved operational visibility across 20K+ daily orders by building Power BI dashboards for OTIF, TAT, inventory accuracy, capacity utilization, shipment ageing and dispatch exceptions, enabling faster operational decision-making.
- Improved peak-period capacity utilization by ~12% by forecasting shipment volumes with Python/Pandas and SQL, combining ABC analysis, SKU velocity, seasonality and historical demand to support replenishment, labor, dock and vehicle planning.
- Reduced recurring transportation and delivery exceptions by ~14% by optimizing lane, hub, load and vehicle performance through TMS and shipment data, identifying consolidation, routing and dispatch-scheduling opportunities.
- Cut manual supply chain reporting effort by ~30% by automating SQL/Excel data preparation and standardized KPI reporting in Power BI, while maintaining GST, E-Way Bill and SOP compliance across shipment documentation and operational data.

EDUCATION:

Master of Science in Business Analytics - DePaul University**, USA, June 2026**
Bachelor of Science in Mathematics - Hemchandracharya North Gujarat University**, India, 2020**
